

***Important Note:**

Please Please DON'T run this game on VS Code. Run the game on the native OS terminal. I've experienced multiple errors on VS Code terminal that does not happen on the native terminal.

1. About the Game

This game is a very short text-based adventure game made by Sonny.

2. Roaming around the world

Since this is an adventure game, you can roam around the world. Usually there are more than 1 direction that you can walk to. Each direction has a corresponding number.

To move to another place, Type "**goto [number]**".

3. People

There are several people living in the world. Depends on your behavior, they might like or dislike you. Each person has a name that you can call. *I could've assign a number, but I thought that calling people with number is not nice!*

To see the list of names that you can talk, Type "**people**".

To talk to a specific person, Type "**talk [name]**"

People can understand and response on certain keywords while you are talking to them.

While talking, Type "**hi**" or "**name**". At least everyone will understands that much.

Some people can understand few more keywords.

4. Items

There are certain objects that you can carry with you. Perhaps you will need them for later even if you find no use right now. Type "**inv**" to check your inventory. You have a Bag of Nacho Chips that you were carrying at the moment you came to this world. Each items in your inventory has a corresponding number.

To see your inventory, Type "**inv**".

To give an item, first **start talking with someone**, then Type "**give [number]**".
